

Jury Review

Danial A. Hassan

For *Designing with Principles* the students demonstrated their understanding about the design principles and design process. The students also have wisely shown a good use of graphic techniques. They are recommended to improve the choice of appropriate graphic techniques for each project. The use of recycled material was very encouraging particularly projects that are purely concerned about the environment. In terms of creativity, the students' basic ideas are very profound but they are recommended to increase their design references and experimentation in order to produce outstanding landscape designs.
